CLOUD-BASED

The Internet of Things is connecting the world, making us smarter and more responsive than ever before. Our EasyTrak solution aggregates data across a comprehensive range of equipment into a single platform, making it easy to access data when you need it. Our cloud-based open platform architecture allows you to ingest data or integrate into your key operational systems.

EasyTrak's features, combined with Kennards Hire industry experience, ensures that you have an all-in-one partner that understands your needs and enables you to have visibility to make decisions from the field or in the office.

REAL-TIME

Through advanced tracking, monitoring and reporting, EasyTrak enables real time asset utilisation, safer work practices, environmental management and a host of key performance metrics to enable better decision making that can help reduce costs and find smarter ways to run your project.
