# TEMPORARY POWER SOLUTIONS

## OUR EXPERTISE

Complex energy requirements call for a specialist who works with you to find solutions. Our team brings substantial experience across a range of industries and environments whether it be building, manufacturing, utilities, mining, oil and gas, agricultural, marine, or emergency services. Your dedicated Kennards Hire power expert will identify, recommend and set up the right solution in the most cost efficient way for your project.

This is achieved by gathering the right information on-site to identify the appropriate generator to support all your power applications. These options can consist of smaller units suited to the actual loads, right through to providing multiple synchronised generator units to switch off and on dependant of the load demands during peak times. This expands to identifying the right fuel management solution, whether it be on site refueling and monitoring or providing reduced fuel burn calculation and smarter generator applications.

## TEMPORARY & PERMANENT ENERGY SUPPLY

We deliver temporary and permanent power supply solutions for any scenario, day and night, at any point in your project.

We provide a fleet of generators from 20 kVA trailer units to 1250 kVA container sets. Combined with our 24/7 service, this allows us to deliver a high standard of emergency service to our customers in a power crisis.

If you happen to be commissioning a newly installed generator, or you're doing some high power load proving, a load bank is essential to making sure your equipment is working at 100 per cent when you need it to.

## AN INTEGRATED 24/7 SERVICE

We understand the value of providing a complete power solution for our customers. This is why we conduct a complete on-site electrical appraisal and customise individual customer requirements to deliver a full turn-key power solution.

Whether you're in the middle of an emergency or need help preparing for a project, your dedicated power solutions team from Kennards Hire is available 24/7. We provide support for project planning, equipment decisions, delivery, installation, on-site monitoring, removal and more. And with our vast range of power generation equipment, we will recommend the right industrial generators, power distribution panels and hardware to meet your needs.

At the same time we're dedicated to providing afterhours help and problem solving, because we're guided by a work ethic that is second to none in the power solutions industry.

## POWER EQUIPMENT RANGE

Whether its a scheduled power outage, emergency power or long-term on-site power solution, we make sure you, and your generator, never go without the necessary hardware. If you're after an external fuel tank for your generator to allow longer run periods, cables or distribution boards of various sizes, we've got what you need to power your project.

TRANSFORMERS

BATTERY STORAGE UNITS

PORTABLE GENERATORS

TRAILER MOUNTED GENERATORS

CABLE, DISTRIBUTION & ACCESSORIES

LOAD SHARING GENERATORS

LOADBANKS

1250 kVA GENERATORS
